www.metermorphosen.de

Since the Industrial Revolution the inventions presented by scientists and inventors have multiplied, one after another, for the benefit of mankind. The "Inventions Rule" by METERMORPHOSEN® provides an overview and organized form in the history of innovations from 1800 to the year 2000.

The Events aspect

From the events aspect one centimeter corresponds to every year. The dates selected cover the essential branches of technology and extend from the sewing-machine via Blue Jeans to the zip fastener, from the telegraph via the Morse Alphabet to the Atlantic Cable. The development of modern times can be understood year by year in words and illustrations. Internet, clones and the decipherment of the human genome round off the events side.

The Epochs aspect

The context to the inventions is presented on the back. In the Technology line the essential means of communication, printing processes and technical methods are presented, while the Social line considers the demographic and economic data. In the Culture line the epoch-making thought patterns and works are mentioned. The "Inventions Rule" is readable as optically synchronized. From the invention via the socio-cultural background in the depth of recent achievements.
